

Your achievements, beside your game

A quick illustrated guide. Your export is the confirmed baseline; live progress is an estimate.

Start with the game-file setup and character connection pages. Then pick a zone, choose an achievement, and keep the tracker beside your game.

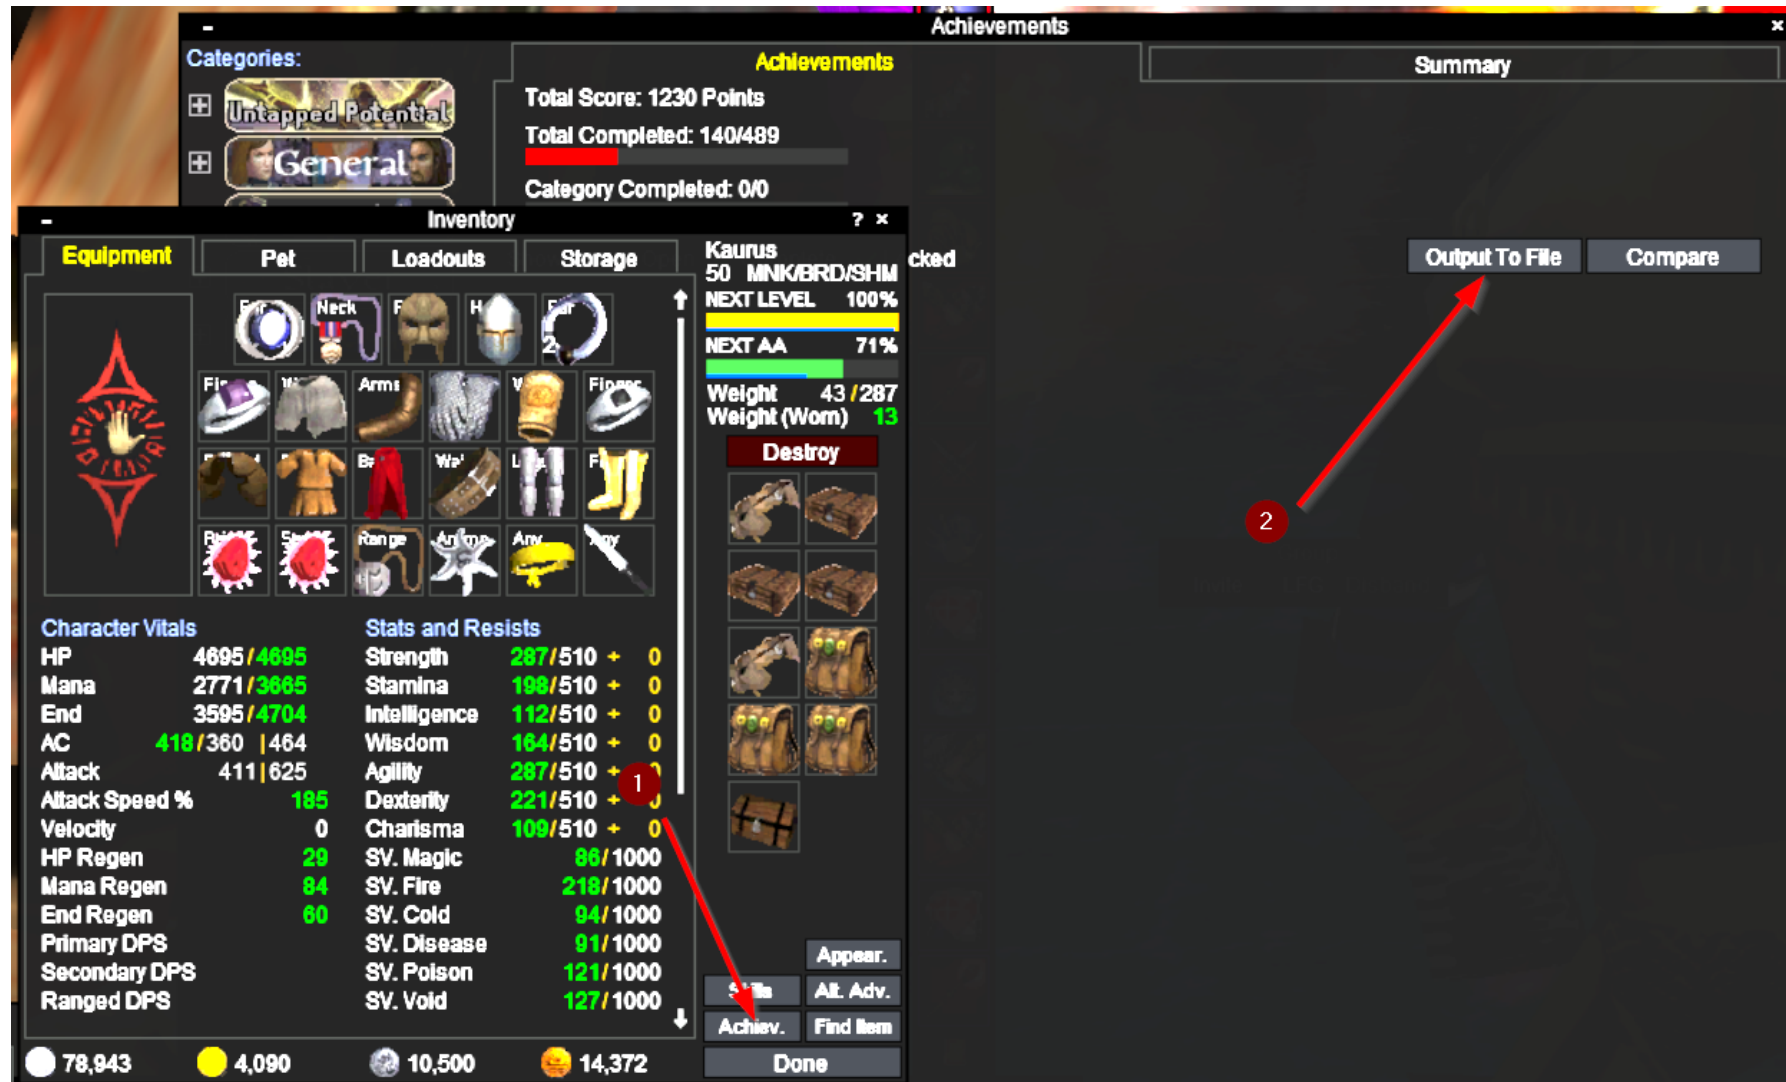

[Watch the gameplay demonstration on YouTube](#)

First: create your two game files

Do these steps while logged into the character you want to track.

Combat log: click the game chat input, type `/log on`, and press Enter. Check for the logging-enabled message. Leave logging on while playing.

Achievement export: open Inventory, click Achiev. (arrow 1), then Output To File (arrow 2). Include all categories and both completed and incomplete achievements when export options are offered.

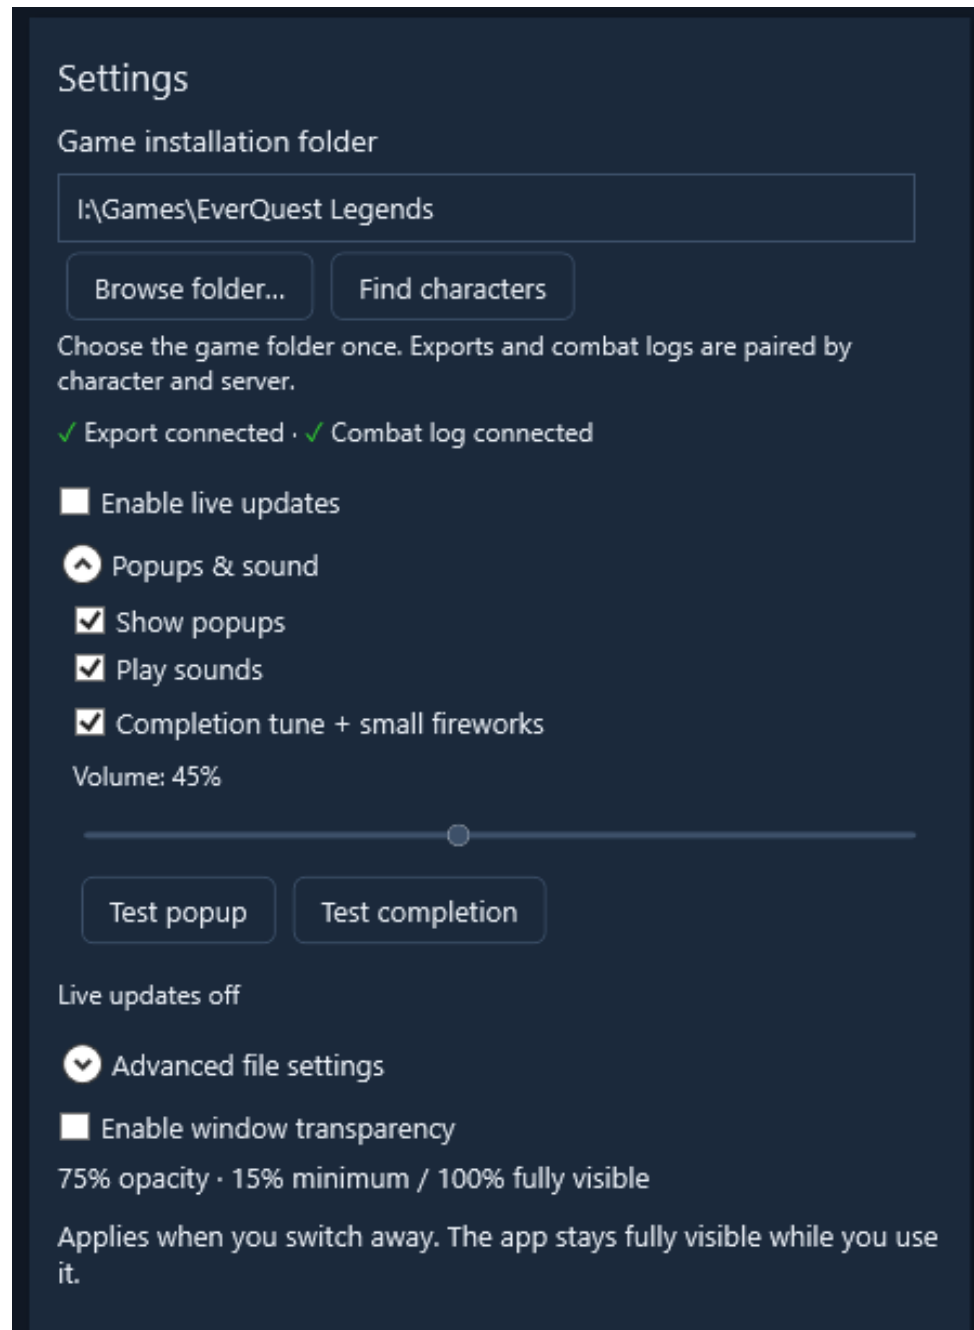

The export is a separate file from the combat log. Click Output To File again periodically to refresh confirmed progress. `/log on` alone does not export achievements.

Next, open the Companion gear, choose the game folder, and click Find characters. Select your character and check that both files show connected. Enable live updates for new kills.

1. Connect your character

Open the clockwork gear. Settings stays inside the app and keeps your chosen theme.

1. Choose your game installation folder with Browse folder, then Find characters.

2. Pick your character and server from the profile selector. The app pairs its achievement export and combat log.

3. Green checkmarks mean files were found. Red crosses mean a file is missing. The label tells you which one.

4. Export achievements in game, including all categories and states. For a combat log, use /log on in game.

5. Enable live updates to watch new log lines. Older kills are not replayed when monitoring starts.

Need another file? Expand Advanced file settings. Your game files are read-only.

2. Choose popups and sound

Expand Popups & sound. Switches save immediately; release the volume slider to save it.

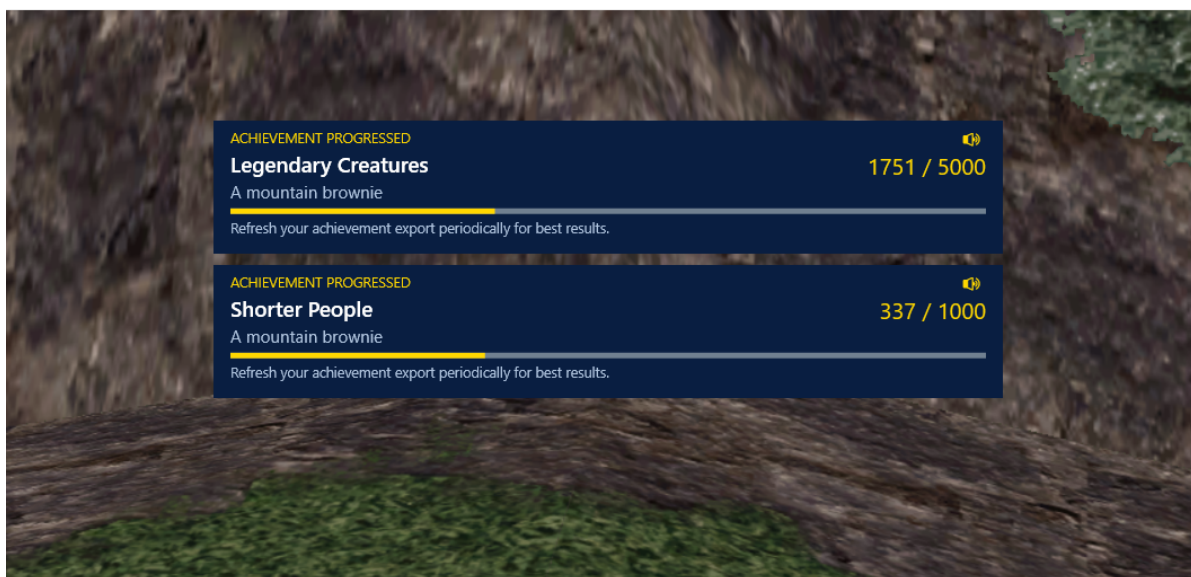

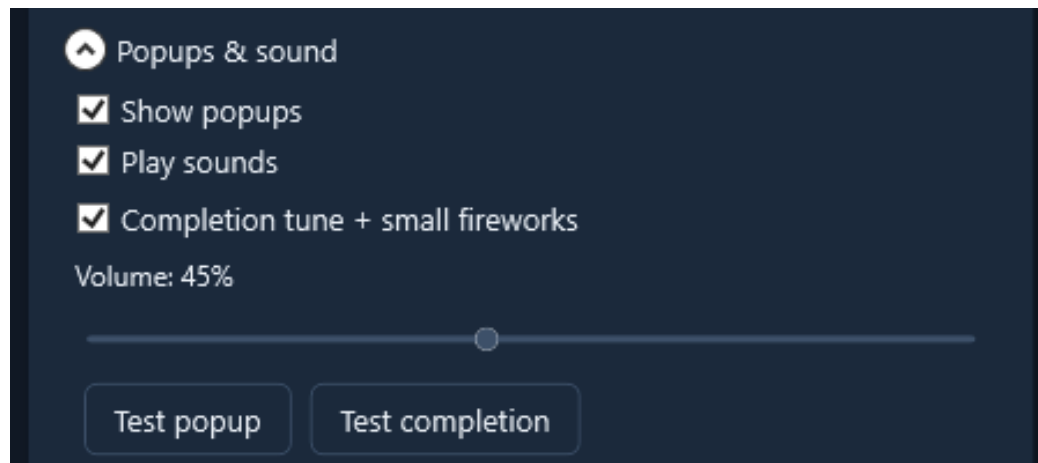

Show popups and Play sounds are independent. You can use silent popups, sounds without popups, or neither.

Live updates keeps working when notifications are off.

Completion tune + small fireworks controls completion effects. The Play sounds switch still controls whether audio plays.

Use Test popup or Test completion to preview the effect without changing progress.

The speaker icon on a popup toggles sound and remembers your choice.

3. Find useful achievements

Show filters to narrow the tiles. Expanded filters push the tiles down; Hide filters restores space.

Choose Focus, Category, State, Farming region or Mob location. Category, region and zone dropdowns let you search their choices and check several at once.

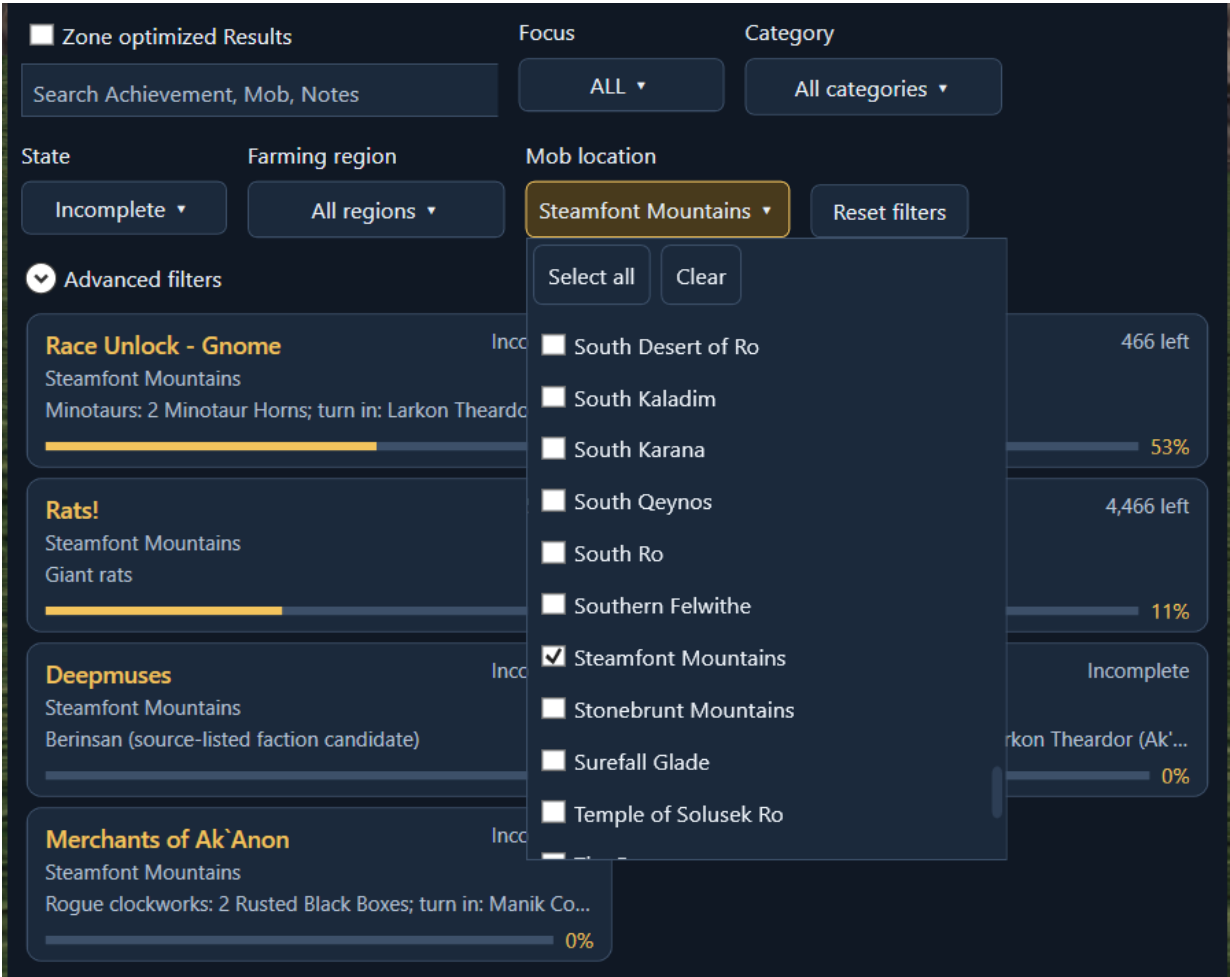

Type into the search box inside a dropdown to find choices. Searching does not clear existing selections.

Use the main search field for achievement names, mobs, requirements and research notes.

Zone optimized Results temporarily shows location options matching your filters. Turn it off to return to your preferred saved locations.

Filters are remembered when you reopen. Reset filters clears the current filter selections.

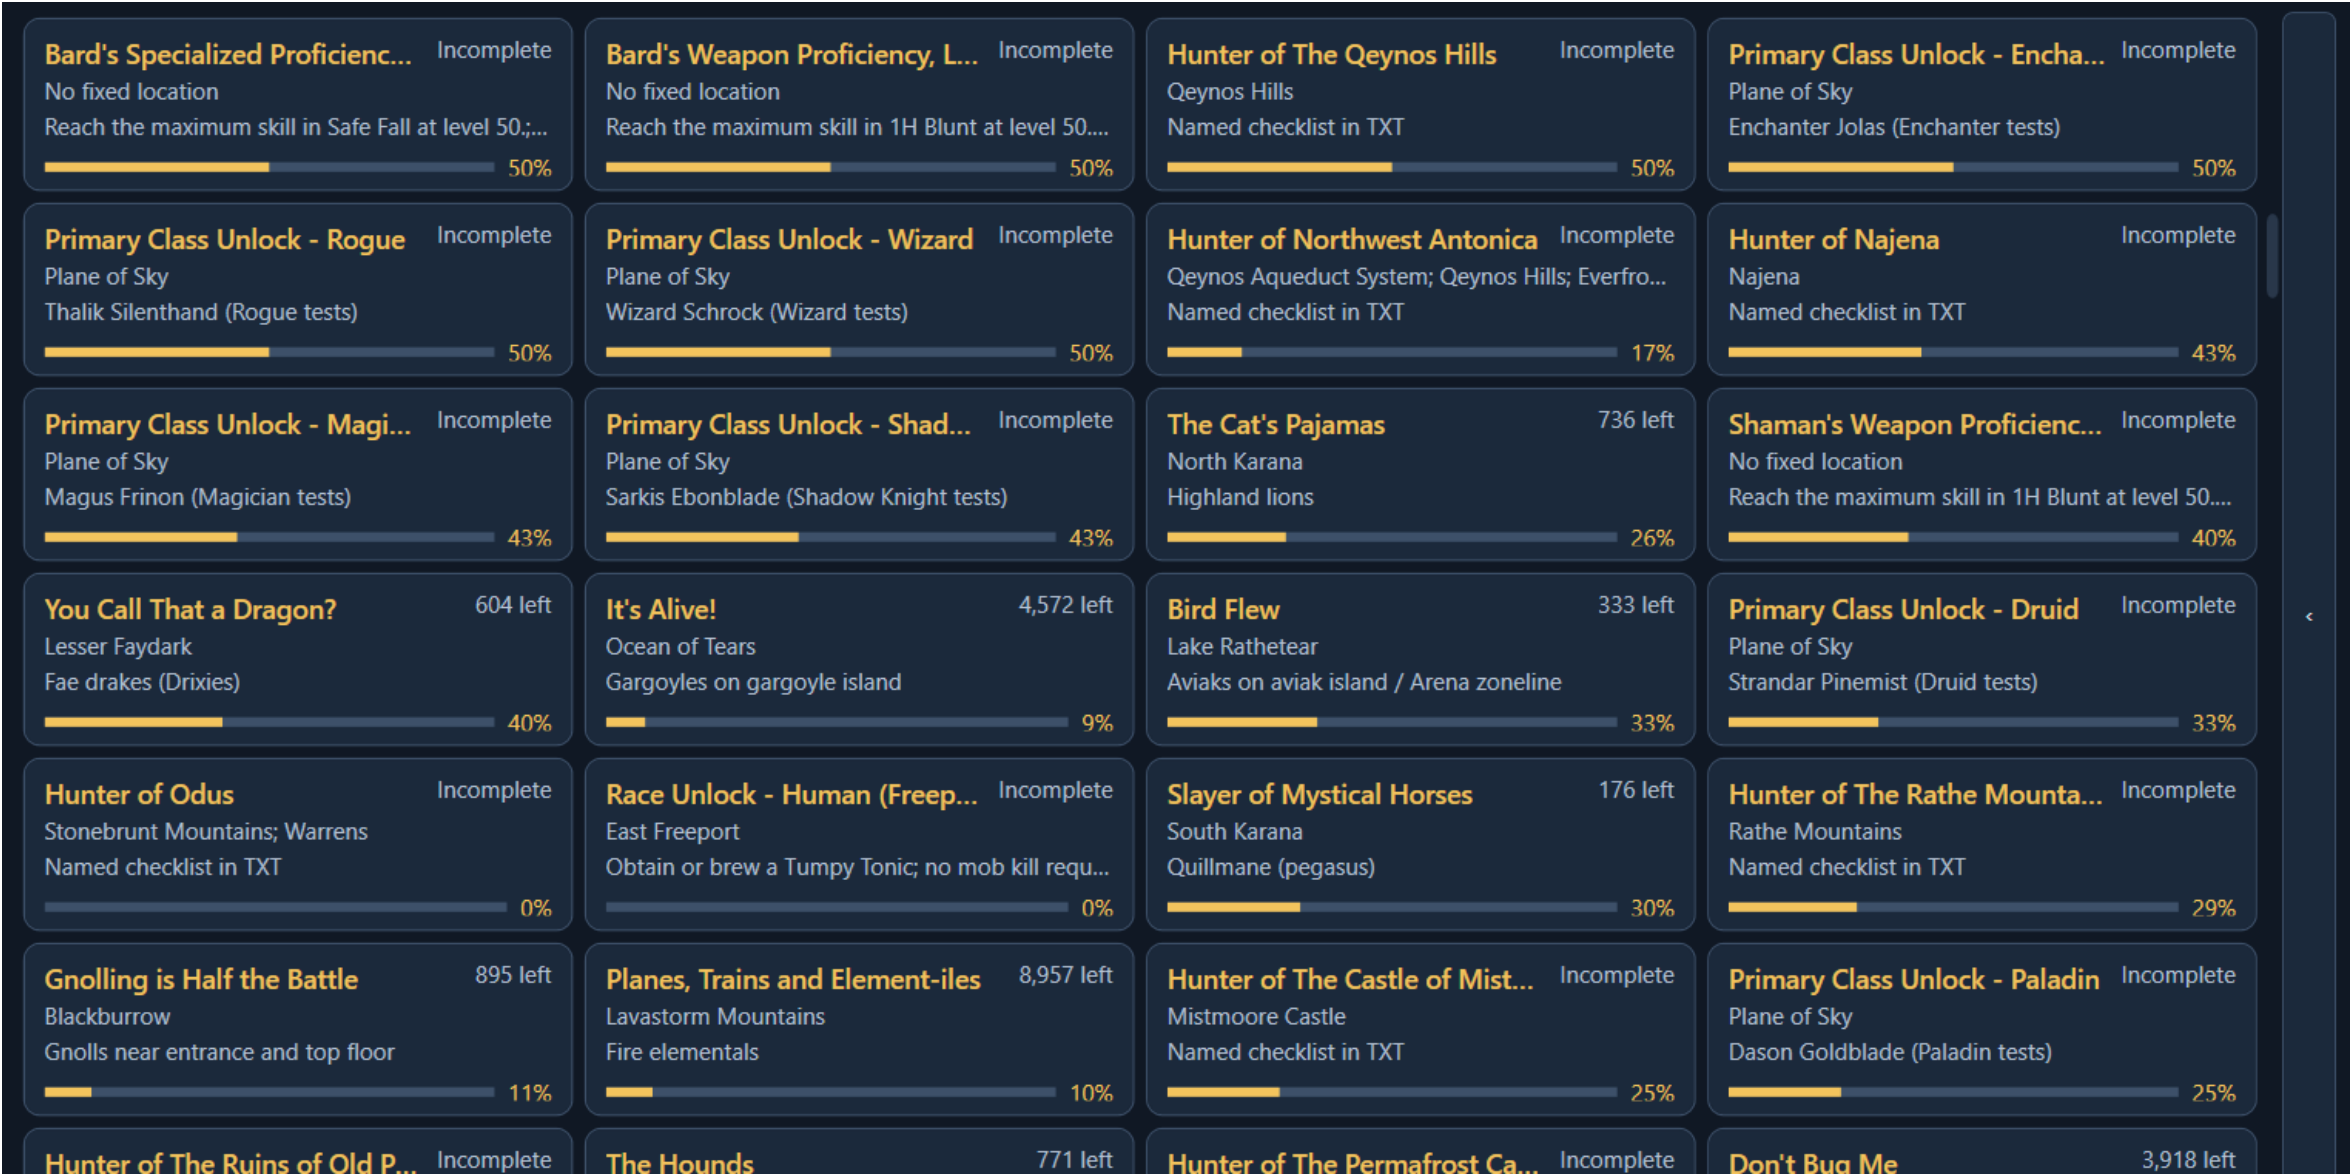

The screenshot shows the zone checklist; the current release also has a search box above its choices.

4. Arrange your tracker

Gold shows the selected Focus. Blue shows Overall. Expand Achievement summary for a short explanation.

Auto shuffle now sits beside Achievement summary. On: recently progressed achievements move first. Off: drag a tile onto another tile to arrange your own order. Manual order is saved per character.

Make the window narrow for one column. Click a tile to investigate; click it again or use Shrink to close the side panel. Pin keeps the app above other windows.

Opacity applies when you leave the app; it becomes fully visible while you use it. The lightbulb switches light/dark mode.

5. Choose a farming location

The research panel holds the details. Your game export is never edited.

Check Use in table beside your preferred location, then Save research. Research edits still need this button; automatic saving applies to Settings switches.

Achievement research

Shrink >

cannot cover every race. Listed camps are candidates unless observed in Legends. Check one kill's counter and faction messages before committing to a long farm.

Still to verify: Current spawn, target credit and faction verification

Ports: <https://eqlwiki.com/Rituals>

Routes: adjacent-zone lists on the linked zone pages. Reviewed 2026-09-11. Fewest documented zone transitions; walking distance, danger and access can change the best choice.

Personal notes (saved here only; do not affect the table)

Available mob locations

Save research

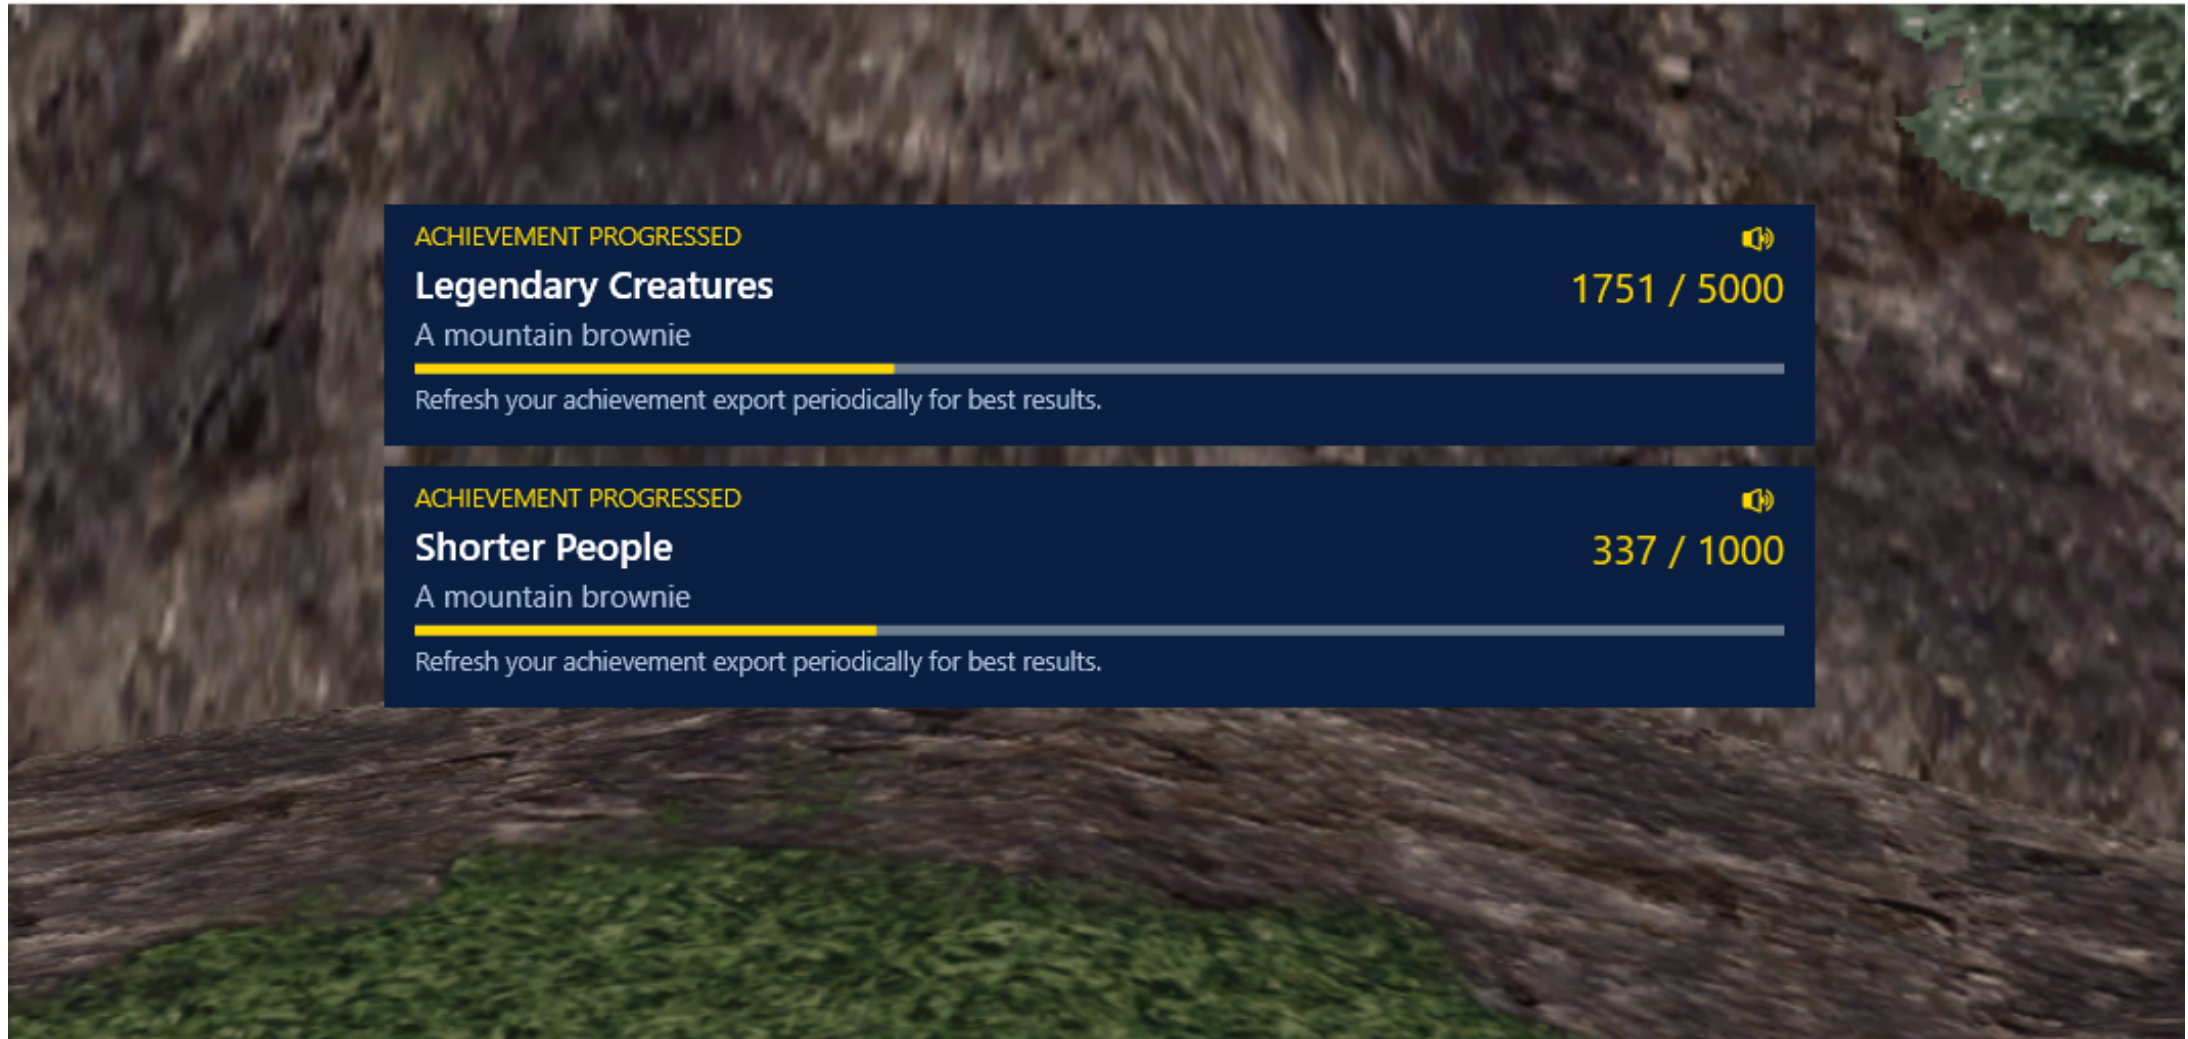

Add one option per zone, with a practical list of mobs that qualify for this achievement. Check Use in table for your preferred zone, then Save research. Selection is a preference, not verification. For item turn-ins, put the collection zone in Zone and list the drop mob, item, turn-in NPC and turn-in zone in the target text. Keep source links and uncertainty in Evidence.

Use in table	Zone	Option type	Region	Mobs / item source & turn-in	Faction
☒	West Karana	Alternative	Karanas	Bandits — Human, High Elf and Barbarian variants (	No fac
☐	West Karana	Alternative	Karanas	Barbarian brigands	No fac
☐	Toxxulia Forest	Alternative	Odus	Lanivon Baxer near wizard spires (-1530, -671)	Wiki re
☐					

Personal notes stay in the panel and do not change the main table. Candidate locations and race variants may need in-game verification.

6. Understand live progress

Several achievements can progress from one kill. Up to three popups are visible; extras wait.

Popups slide down and fade in. Each stays for eight seconds after arriving. When one expires, it fades out and the others slide up.

Your own kills and recognized current-pet kills can produce estimates. Generic bandit names do not identify a race, so the app does not guess their race credit.

Periodically make a fresh achievement export. The app detects it and updates the confirmed counts; you can also use Load / Refresh under Advanced file settings.

A popup can appear for an achievement hidden by your filters. It will not override your filters to insert that tile.

7. Update and get help

The app checks GitHub automatically. You decide when to install an available update.

1. Look at the bottom-left version status. A gold Start update button appears when a newer version is available.
2. Click the information icon for installed-version patch notes. Click Start update to download and verify the new executable.
3. Confirm installation. The Companion closes, replaces its executable, and reopens. Your saved data remains in place.

For a fresh install or the latest illustrated guide, download the release ZIP and extract the whole folder. The executable updater replaces the app only; it does not refresh the PDF.

More > App Guide opens this PDF when installed. The ZIP also includes a short text guide.

A kill not counted? Check the selected character, connected log, Enable live updates, your filters, and whether the achievement is already complete. Compare a fresh export before deciding the game gave no credit.

Downloads and release notes

8. Mob names and Banestrike milestones

New in this release: simple additions, fewer columns, and clearer progress.

Add a mob name: click an achievement tile and find Mob names in the detail panel. Type the name, then click + or press Enter.

Names save immediately. Use the remove button beside a name to delete it. Duplicate names are blocked, and each achievement keeps its own list.

This is your reference list. Adding a name does not create a live-kill matching rule or change achievement counters.

Your list is stored locally in data/mob-names.json. Keep your data folder when updating. Lists are not uploaded automatically.

Choose BANESTRIKE focus to see three separate progress segments: Progressive, Highly Decorated, and A Force of Nature. Each is a +1 rank milestone; completed milestones turn gold.

Remaining counts come from the required entries in your latest export. Optional entries are excluded, and search or zone filters do not change those totals.

The main table now shows achievement, zone, target instructions, remaining count and progress. Open the detail panel for routes, faction requirements and specific unresolved questions.
